

A multi-use dividing solution, bypassing systems use two or more doors and only two rows of tracks. Sliding bypassing systems are great for dividing smaller rooms, offices, meeting spaces closets and areas where narrow hallways restrict swing doors. Each door has a small floor guide to help align and stabilize the panels.

Maximum Panel Sizes:

Model	Sizes
Model 175	3x8
Model 225	4x10

USAGE: High frequency

OVERLAPS: Standard panel overlap is 3"

CLEARANCE: Approx. 30-50%

DESIGN TIPS:

- When using in a higher traffic environment, always use Model 225 panels.
- Works well even if you need a panel to be fixed in place. Set track stops to make one panel stationary or add a flush bolt and panels can still be moved later if preferred.
- Protruding hardware will reduce clearance.
