

Sliding Pocket doors are ideal for the flexibility of interior planning, i.e. where a swinging door or exposed sliding door would interfere with the clearance or furniture. Great for bedrooms, kitchens, bathrooms, offices, pantries, closets and areas where narrow hallways also restrict swing door movement. The pocket door has an edge mounted finger pull to retrieve it from the pocket. A guide rider is mounted at the back edge to allow the door to fully extend from the pocket, so a wider stile is not needed for compensation. A floor mounted guide, inside the pocket only, helps align and stabilize the panel while in the pocket. A pocket concealment panel conceals the gap left by the extracted panel for a cleaner finished look.

USAGE: High frequency

OVERLAPS: None

CLEARANCE: 100%

DESIGN TIPS:

- When using in a higher traffic environment, always use Model 225 panels.
- Protruding hardware will reduce clearance and can effect the panels access to the pocket area.
- Pocket depth = panel width plus 2"
- Paint the pocket concealment panel the same color as the wall so pocket disappears when door is extended.

Maximum Panel Sizes:

Model	Sizes
Model 175	3x8
Model 225	4x10
